A briefing for the UK’s Brexit negotiators to protect yourself against surveillance
A briefing for the EU’s Brexit negotiators to protect yourself against surveillance
UK NEGOTIATORS:

YOU MAY BE A TARGET FOR SURVEILLANCE

STAY SECURE!

Countries across the EU have recently passed legislation granting their intelligence agencies wide-reaching powers to hack devices and to intercept, store and analyse data. As a negotiator for the UK’s withdrawal from the EU, it is essential that your personal data is secure from all adversaries.

SOME COUNTRIES IN THE EU CAN:

- Hack foreign institutions and people
- Activate a device’s microphone, webcam or GPS-locator technology
- Intercept internet traffic travelling on undersea fibre optic cables
- Access raw intelligence collected by partner intelligence agencies
- Force service providers to decrypt communications

PROTECT YOURSELF WITH A FARADAY CAGE

A Faraday Cage blocks all electromagnetic signals from reaching your device. Use it when you don’t want adversaries to hack or track your phone.

But please bear in mind that a Faraday Cage won’t totally protect you. Your adversary has powerful and sophisticated tools to undermine your privacy.

Don’t you wish that there were stronger laws against state surveillance powers?
